

Air Force Digital Dental Radiography Solution (DDRS) UPDATE (5/07)

The Dental Evaluation and Consultation Service (DECS) is actively seeking any and all questions and "lessons learned" from Air Force Dental clinics during the Digital Dental Radiography implementation and deployment process. As our initial Air Force clinics finish the actual deployment of digital hardware and software, DECS is receiving very useful information revealing trends of the same problems occurring during the entire process at many facilities. By serving as a central "clearing house" of ideas and recommendations, DECS can continue to do what it has always done best, eliminate the need for each facility to "reinvent the wheel." We recently added a section on our Web site dedicated to digital dental radiography information. It can be accessed by clicking on the "Digital Dental Radiographic Systems (DDRS)" link on the DECS home page. We're here to receive your calls and e-mails!

Dental Digital Radiography Solution
DDRS

This page contains information concerning the deployment and use of digital dental radiographic equipment and related software/systems applications in the United States Air Force Dental Corps. The information is divided into categories to make it easier to find subject matter. Please note that at the top of each page is a link to download a printer-friendly version.
