

OSAP Infection Prevention IQ Quiz

The Organization for Safety, Asepsis and Prevention (OSAP) recently posted an Infection Prevention IQ quiz (“Contagion Quiz”) on their Web site. The quiz is intended to “infect” your staff with infection-prevention knowledge and be the basis for a discussion on infection-control precautions and how they protect against risks large and small. Additional information and the “Contagion Quiz” can be found by visiting: www.osap.org/?page=Contagion#Contest.

BIOHAZARD

The Next Pandemic: It's Not If, But When

CONTAGION

Find out what's happening in your area and what you can do at TakePart.com/Contagion

The new movie *Contagion* raises questions about what might happen - on a personal, national and global level - if an unknown and quickly replicating deadly disease was able to spread unchecked. How would it start? How would it move? And how would we deal with it?

Disease transmission is very real. History reminds us of the 1918-19 "Spanish Flu" that ultimately infected an estimated one third of the world's population (approximately 500 million persons). Despite vaccines, antibiotics and other modern medical tools, microorganisms have an uncanny knack of spreading.

The OSAP Board encourages you to take advantage of the release of this Warner Bros. film to discuss these important issues about disease prevention with your staff, students and peers. Participate in OSAP's fun contest designed to help spread the word. And check the related resources.

Disease transmission - it's not "IF" but "WHEN". Please do your part in stopping transmission before it starts. And go see the movie -- just wash your hands before you eat your popcorn!

INFECTION PREVENTION IQ | CONTEST | RESOURCES |

Test Your Infection Prevention IQ

"Infect" your students or staff with infection prevention knowledge. Use this QUIZ as the basis for a discussion on standard infection control precautions and how they protect against risks large and small.

Contest to "Spread" YOUR Knowledge

Contagion shows that nothing spreads like fear. At OSAP, we know that nothing protects like good infection prevention and control procedures. Are you sure you and your staff are prepared? Would you stake their lives on it?
