

## New Dental Equipment

Denovo recently introduced **ClearField™**, a one-piece cheek retractor and dry field apparatus appliance. The manufacturer claims, the cheek shields on either side provide comfortable retraction cheeks and lips, and the special tongue guard prevents the tongue from interfering in the procedures. ClearField is said to be perfect for direct bond applications, tooth whitening, or any procedure that requires a wide field of view of the anteriors to the first molars. The two aspirator hooks, one on each side, allows the user to attach an aspirator tip to the device. Easy insertion and removal instructions are included. According to Denovo, the ClearField is made from a specially formulated FDA approved plastic, that can withstand multiple sterilization cycles without any visible degradation. The appliance can be sterilized by autoclave, cold sterilization or chemiclave. Clearfield is available in adult (gold) and junior sizes (black).
