

## New Dental Equipment

Bing Innovations recently introduced **DentalVibe Generation II**. The multi-purpose Injection Comfort System is designed to alleviate injection pain intraorally, retract tissue, and transmit light with white LED illumination. DentalVibe is based on the Gate Control Theory of Pain which results in the blocking of injection pain. DentalVibe Generation II is a cordless, rechargeable, hand-held device that reportedly delivers soothing, pulsed percussive vibration by gently tapping the surrounding mucosa of the injection site. The manufacturer states that a typical injection time is 30-60 seconds in any area of the mouth. The single use comfort tips are reportedly designed to shut off if excessive force is applied during use. They are available in adult and pediatric sizes. DentalVibe Generation II also provides an audible stimulus to distract patients and soft pliable children's finger puppets for pediatric dentistry. The unit comes equipped with a rechargeable NiMH battery (pre-installed), charging base, quick start guide, user manual and 50 single-use comfort tips (specify tip size when ordering). DentalVibe Generation II is available for \$595.00 (suggested retail) and \$495.00 (government). Single-use comfort Tips (50 per bag) are \$69.50 (retail/government). Soft, pliable, latex-free children's finger puppets (50) are available for \$12.50 (retail/government).
