

New Equipment

The **Isolite i2** is a dryfield illuminator manufactured by Isolite Systems that is designed as three tools in one system offering continuous illumination, aspiration and retraction capabilities. The unique, patented Isolite mouthpiece is reportedly the heart of the Isolite system. According to Isolite, the disposable, soft, flexible, non-impinging Isoflex™ mouthpiece: isolates maxillary and mandibular quadrants simultaneously; retracts and protects tongue and cheek; delivers bright, shadowless illumination throughout the oral cavity; continuously aspirates fluids and oral debris; and obturates the throat to prevent inadvertent aspiration of material. The disposable latex-free mouthpieces are available in pedo, adult small, adult medium, adult medium deep vestibule (DV), and adult large sizes. The manufacturer claims that the new LED technology and the streamlined design of Isolite completely eliminate the need for a light box and fiber optic cable and that the Isolite System can be installed easily in minutes using a standard electrical outlet. The Isolite LED light source reportedly features a "CURE-SAFE" setting while working with light-sensitive materials. Also, the ergonomic design of Isolite is said to reduce fatigue and repetitive stress associated with retraction, suctioning, eyestrain, and motion spent adjusting headlights, overhead light or otherwise positioning the patient for better access or visibility. The Isolite i2 system is available for \$1,695.00 (suggested retail) and \$1,356.00 (government). The disposable mouthpieces are available in packages of 10 for \$25.00 (suggested retail) and \$19.95 (government).

RGP Dental Inc™ recently introduced the Swedish Seating System **400-D** operator stool. According to RGP, the unique aspect of the 400-D is its ability to "fit" the individual. RGP claims the key to the ergonomic benefit of this stool is its unique mechanism, which allows the back support and seat of the chair to follow the occupant as they lean forward to their task. The "free motion" feature reportedly allows the 400-D to conform to individual requirements for specific activities. Additionally, RGP integrated the **Relax** and **Hydro** armrests which claim to form a **Shoulder Support System**. One feature of the **Relax** and **Hydro** armrests is that they swing laterally side-to-side and telescope forward and back. The **Hydro** adds a third dimension through its tension-adjustable up and down motion. The stool may be used with or without the armrests. The **400-D** is available in vinyl, leather and cloth with an assortment of custom colors. The 400-D is available for \$784.00, Relax arm support \$156.00, Hydro arm support \$176.00 (suggested retail/government). An upgrade to standard ultra-vinyl is an additional \$50.00. Free shipping is available for government account holders.
