

## New Equipment

The **Symmetry IQ™ 3000** from Hu-Friedy, Inc. is a piezoelectric scaling device. The unit operates with high frequency ultrasonic vibrations (28-36 KHz) and has touch pad function and pre-defined color-coded power controls. Power is activated using a foot control and water flow can be changed with an adjustment knob. The unit has a preset memory function allowing the preferred operation mode, power setting and water flow to be saved for future use. The sterilizable handpiece provides fiber-optic illumination to enhance vision. A variety of piezo scaling tips are available along with an application chart that recommends tips for procedures from the removal of light supragingival deposits to heavy deposits in deep periodontal pockets or furcations. The scaling tips must be purchased separately from the unit and each tip comes with its own Guardian Wrench/Tip carrier. The carrier is used to place the scaling tip on the handpiece and for tip removal post procedure; the tip remains within the carrier during sterilization procedures. The carriers are color coded to match the power settings on the unit, reminding users of the recommended power level to be used for each tip. Electrical specifications are 110 or 230 VAC, 50/60 Hz. The Symmetry IQ™ 3000 unit is available for \$1,650.00 (suggested retail) and \$921.82 (government). Additional fiber-optic handpieces are available for \$570.00 (suggested retail) and \$354.83 (government). The prices for the scaling tips range from \$95.25-\$136.50 (suggested retail) and \$53.95-\$65.36 (government).

---

Kerr/Sybron Dental Specialties recently introduced the **Demi LED Light Curing System**, which is said to be approximately half the weight and size of the Demetron LED curing lights. Designed to ergonomically reduce stress on the user's hands and wrists, the Demi also contains a built-in fan that is advertised to keep the unit cool while extending the overall life of the LED. The Demi is advertised as containing the Periodic Level Shifting (PLS) curing technology, which shifts output intensity periodically during the curing cycle that is said to allow a five-second cure for all composite shades A3 and lighter. The lithium-ion battery and power management system is touted to provide extended performance, lasting three to four days between charges. The Demi is said to accept all Demetron light guides. The Demi LED Light Curing System (#910770) is available for \$1149.00 (suggested retail) and \$672.92 (government) and includes the Demi Handpiece, 8 mm Turbo Light Guide, battery pack, battery charger, 120V power supply, and protective light shield. Items are also available individually.
