

## New Infection Control Products

The **Correct Medication Labeling System™** from Sandel Medical Industries was developed in accordance with The Joint Commission National Patient Safety Goals which require all medications, medication containers such as syringes, medicine cups, basins or other solutions on and off the sterile field be labeled even if there is only one item. Sandel offers a variety of prepackaged sterile kits and will also prepare custom sterile kits. Marking pens, medication labels, and identification (ID) flags are just several items that could be included in a custom kit. Preprinted labels are available or you can order customized or blank medication labels to meet your needs. The labels are reportedly made of a moisture and smear resistant polyester material and will not fall off even when exposed to water and the ID flags can be applied to stainless steel basins, med cups, glass cups, and won't leave a residue.

**For additional information and pricing for custom kits contact Sandel Medical Industries at:**

**Enzymax Spray Gel** is a ready-to-use spray gel designed for instrument pre-cleaning from Hu-Friedy. Enzymax Spray Gel is reportedly a pH neutral, dual enzyme gel that maintains moisture to help prevent debris from drying onto instruments when they cannot be processed right away. According to Hu-Friedy, simply spray the gel directly onto soiled instruments, allow to soak, rinse if desired, and process instruments as usual. The spray gel helps dissolve blood, tissue, and other debris eliminating the need for scrubbing and reducing the chances of splashing from other soaking pre-cleaning solutions. The manufacturer reports that Enzymax Spray Gel is designed with a corrosion inhibitor to protect instruments and cassettes from discoloration and corrosion and the spray gel is environmentally friendly as it is biodegradable and phosphate free. Enzymax Spray Gel is available in a 24 oz spray bottle (IMS-1229) for \$16.00 (suggested retail) and \$9.60 (government).
